(54) AUTOMATIC TRANSACTION SYSTEM

(57)Abstract:

PURPOSE: To execute a paying processing even when an amount of payment beyond a limit payment amount for one time is inputted.

CONSTITUTION: A division payment discrimination means 30 compares the inputted payment amount with a limit payment amount and outputs a division payment command when the inputted payment amount is larger. In response to the command, a repeated payment control means 31 repeatedly outputs a payment command instructing the payment of the limit payment amount to a bill input/output device 8 to make the device 8 execute an money output processing. When the remaining payment amount becomes smaller than the limit payment amount, a payment monitoring means 32 stops the payment command and a remaining amount payment control means 33 controls the bill input/output device 8 to output the remaining

payment amount.
